Economic Commentary and Market Review - February 2018

The market tumbled in February due to negative sentiments sweeping the market. Nifty corrected around 5% reaching 10,492 at the end of the month. Factors that impacted the market include introduction of long term capital gains tax from listed equities exceeding Rs. 1 lakh at the rate of 10% without allowing the benefit of any indexation in the Union Budget; minutes from the Federal Meeting indicating higher than expected rate hikes in 2018; hardening of U.S. bond yields due to near term uncertainty; and deep correction in PSU banks owing to news revealing consortium of banks involved in Nirav Modi scam.

None of the sectors during the month ended in green. PSU banks were the top loser during the month due to the outbreak of PNB scam followed by Finance owing to higher bond yields hurting the banking income.

FII's withdrew from both the equity and debt markets in February. In the equity market, the outflow was to the tune of ~Rs.11,000 crore. In the debt market, FII's withdrew for the first time in the last 12 months to the tune of ~Rs.250 crore. Mutual funds industry continued to support the market, infusing more than Rs.16,000 crores into equities and ~Rs.33,000 crores into debt during the month.

At their latest meeting, the RBI left interest rates untouched at 6%, citing upside risks to inflation. The Monetary Policy Committee (MPC) once again raised its inflation target to 5.1% - 5.6% for the first half of the year due to continued increase in crude oil prices and implementation of HRA by States, which could ease to 4.5% - 4.6% (compared with earlier projection of 4.3% - 4.7%) for the second half of this fiscal year. The MPC also lowered its real GVA growth forecast for FY18 to 6.6% from 6.7% and for FY19 to 7.2% from 7.4%.

At the 2018 Union Budget, several measures that were announced by the government include setting up MSP at 1.5x the production cost for kharif crops, allocation of Rs.14 billion for enhancing food processing, Rs.11,000 billion credit for farm sector as well as an investment of Rs.5,970 billion in order to boost affordable housing and hike in budgetary allocation on railways. As a result, the government has revised the fiscal deficit target for FY19 upward at 3.3% of the gross domestic product (GDP) against the earlier target of 3%. The government has also revised the budget estimate of fiscal deficit for FY18 to 3.5% of GDP (same as FY17) from the earlier estimate of 3.2% of GDP due to a shortfall of Rs.50,000 crore on account of the goods and services tax (GST).

India's retail inflation softened more than expected, rising 4.4% in February. Thanks to fresh supplies of onion and tomatoes in the last few months that pulled vegetable prices lower. India's industrial output for January beat estimates rising 7.5% year over year due to pick up in manufacturing activity. 16 of the 23 industry groups in the manufacturing sector recorded growth for the month.

India's fiscal deficit in April - January FY18 reached 113.7% of the revised target. In absolute terms, fiscal deficit stood at Rs.6.77 lakh crore in the first ten months of the year compared with the revised estimate of Rs.5.95 lakh crore. Meanwhile, India's trade deficit in January soared to a 56-month high of \$16.3 billion driven by imports of precious stones (up 55.7%) and crude oil (up 42.6%) as well as slowdown in exports growth. Merchandise exports went up 9.1% while merchandise imports grew 26.1% in January.

There is limited downside potential for Nifty backed by robust inflow from institutional investors. Several factors such as smooth implementation of GST, resolution of banking system NPA, and revival of investment cycle would decide the future course of the market.

Return of Shriram Equity & Debt Opportunities Fund in February stood at 11.63% CAGR (since inception) accompanied by lower levels of volatility. Amidst volatility and short term uncertainties, we try to achieve stable risk adjusted return based on fundamentally sound and good quality stocks. In this backdrop, retail investors would do well by maintaining their exposure to equity and equity oriented hybrid funds such as Shriram Equity and Debt Opportunities Fund through regular systematic investments as this asset class has a consistent track record that will outpace price inflation.

Past performance may or may not be sustained in future. The returns are Compounded Annual Growth Returns (CAGR) for periods since Inception and absolute for 1 year and simple annualized for less than 1 year. Performance of dividend option would be Net of Dividend distribution tax, if any. Benchmark is a blend of 70% NIFTY 50 TRI for the Equity part of the Portfolio & 30% of CRISIL Composite Bond Fund Index for its investments in Debt and Money Market Instruments. For computation of since inception returns (%) the allotment NAV has been taken as Rs. 10.00. Load is not considered for computation of returns. In case, the start/end date of the concerned period is a non business date (NBD), the NAV of the previous date is considered for computation of returns. The NAV per unit shown in the table is as on the start date of the said period. **Benchmark Index:** 70% of Nifty 50 TRI Plus 30% CRISIL Composite Bond Fund Index. Since Inception returns are calculated 70% CAGR of Nifty 50 TRI plus 30% CAGR of CRISIL Composite Bond Fund Index.

SIP Performance				
	Since Inception SIP	3 years SIP	2 years SIP	1 year SIP
Total Amount Invested (Rs.'000)	510.00	360.00	240.00	120.00
Mkt Value as on Feb 28, 18 (Rs.'000)	627.34	416.59	269.88	125.31
Returns (Annualised) (%)	9.72%	9.73%	11.77%	8.35%
Benchmark Returns (Annualised) (%) #	11.41%	11.85%	13.69%	10.18%

As per SEBI circular no. SEBI/HO/IMD/DF3/CIR/P/2018/04 dated Jan 04, 2018. In benchmark Nifty value taken as Total Return Index value

Past performance may or may not be sustained in the future. # Benchmark index is constructed by investing Rs. 70 in Nifty TRI value and Rs. 30 in CRISIL Balanced Fund Index on the date of allotment. Assuming Rs. 10000 invested systematically on the first Business Day of every month over a period of time. CAGR returns are computed after accounting for the cash flow by using XIRR method (invest internal rate of return) for Regular Plan - Growth Option. Load is not taken into consideration for computation of performance. The above investment simulation is for illustrative purpose only and should not be construed as a promise on minimum returns and safeguard of capital. The AMC/Mutual Fund is not guaranteeing or promising or forecasting any returns.

HOW TO READ FACTSHEET

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Yield to Maturity

The yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

SIP

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for a period of three years.

NAV

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the NIFTY, Sensex, BSE200, BSE500, 10-year Gsec.

Entry load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund.

The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs. 100 and the entry load is 1 %, the investor will enter the fund at Rs. 101. (note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor).

Exit load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit load. For instance if the NAV is Rs. 100 and the exit load is 1%, the investor will receive Rs. 99.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, its means its range of performance is wide, implying greater volatility.

Sharpe ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta ratio (portfolio Beta)

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

R Squared

It is a statistical measure of how closely the portfolio returns are correlated with its benchmark.

AUM

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
